SUMMARY

Machine Learning Engineer with a strong foundation in Python and core ML concepts, including regression, classification, and model evaluation. Experienced in building end-to-end ML solutions using Scikit-learn and SQL, with exposure to NLP, transformers, embeddings, and RAG systems. Focused on writing clean code and developing scalable, real-world ML applications.

EDUCATION

KPR Institute of Engineering and Technology, Coimbatore, Tamil Nadu 2023 – 2027
B.E. Computer Science and Engineering (Artificial Intelligence and Machine Learning)
CGPA: 8.44

Jai Sardha Matric Higher Secondary School
HSC: 92.3% 2022 – 2023
SSLC: 92.3% 2020 – 2021

Skills

Languages: Python, JavaScript, Java, SQL
Machine Learning: Regression, Classification, CNN, Model Evaluation (Accuracy, Precision, Recall, F1)
AI/LLM: Prompt Engineering, LLM, RAG, Hugging Face
Frameworks: TensorFlow, Scikit-learn, Django
Data Tools: Pandas, NumPy
Backend & APIs: REST APIs, Node.js
Tools: Git, GitHub, Figma

INTERNSHIP EXPERIENCE

Nitroware Technologies Pvt Ltd. (ML Intern) Jan 2025 – Feb 2025

- Built and deployed a responsive web application for bone tumor detection using HTML and CSS, improving clinician interaction with the ML model and reducing manual analysis time by nearly 30%. [\[Link\]](#)
- Implemented and optimized a Convolutional Neural Network (CNN) for medical image classification, achieving **92%** accuracy on validation data and enhancing overall diagnostic reliability.

PROJECTS

- Multilingual AI Voice Assistant for Campus Navigation** Voice-enabled navigation assistant supporting multilingual responses, obstacle detection, signboard reading, and real-time route guidance. *(Submitted for publication in Engineering Advances 2025 Conference)*
- LinguaMind AI: An AI-Powered Personalized Language Learning Platform** Developed LinguaMind AI, an AI-powered language learning platform using React, Firebase, and Groq API that provides personalized tutoring, speaking practice, and progress tracking. Implemented real-time chatbot, speech recognition, and analytics dashboard to deliver an interactive and adaptive learning experience.
- Digital Study Room (Virtual Library)** Developed an ML-based productivity application with task tracking and real-time collaboration features. Applied basic machine learning techniques to analyze user behavior and generate task prioritization insights. Built backend APIs for session management, progress tracking, and scalable user data handling.
- AI Code Explainer** AI-powered tool that generates simple explanations and flow diagrams from code, improving understanding for beginners through interactive UI and adaptive difficulty levels.

CERTIFICATIONS

- NPTEL: Introduction to Large Language Models (Jul – Oct 2025)
- NPTEL: Data Analytics with Python (Jan – Apr 2024)
- HackerRank: React, JavaScript (Feb 2026)
- Infosys Springboard: AI Primer, Principles of Generative AI (Jun 2025)
- IIT Bombay Spoken Tutorial: C, Java, C++ (May 2025)
